House Plants

After the last frost for your area, houseplants can be moved outside to a partly shaded place. Gardenia , Hibiscus, and citrus plants should be in full sun.

Lawn

Grubs in the lawn should be killed with [Bayer Dylox](#). Use the Bayer Dylox when there are more than 7 white grubs in a 1 sqft area.

When there are less than 7 in a 1 sqft area and your lawn was fed with [turf trust](#) and you will be using [Kick Start](#) this summer, then your grass roots will be growing faster than the Grubs will be eating the grass roots, so your lawn will be able to stay healthy.

Plants

Hardy Hibiscus that normally grow too tall, can be pinched before the asparagus looking spears are 8-10 inches tall. The pruned hardy Hibiscus, will be more bushy and shorter growing, without sacrificing flower production.

Feed the hardy Hibiscus with [Plant Trust flower and bulb formula](#). The best type of red hardy Hibiscus is Lord Baltimore.

The first signs of spider mites are showing up in the Alberta spruce Use [Pure Spray Green](#) to eradicate them. The signs of this are browning from the inside out.

Make sure the spruces are fed with [Plant Trust](#) to make them more able to repair from the mite damage.

Roses

Beautiful roses to consider are David Austin Roses. The David Austin Roses are English roses that are fragrant, repeat blooming and most of them are hardy to zone 5.

For healthy disease resistant plants feed your David Austin Roses with 4 oz of [Plant Trust Flower and Bulb formula](#). In early spring, then again in Mid August. For more info go to www.davidaustinroses.com

Vegetable Garden

The prevention of weeds in the vegetable garden, can be accomplished with mulching with Sweet Peet.

This unique looking Sweet Peet mulch protects your vegetable roots from the summer heat and it also suppresses unwanted weeds.

While it protects your plants, it also feeds your vegetable plants naturally, while it transforms into hummus after the season, this humus can be tilled into the soil as a soil conditioner, for next years crop.

Sweet Peet mulch can also be used in flower beds for weed suppression and a source of natural fertilizer.
