

October 28,2012

Shrubs:

Check the Ph on evergreens and shrubs that like a high Ph (Arborvitae, Yew, Boxwood, Lilac, Privet, Ligustrum, and Peony) use [an electronic Ph tester](#) to test the ph. If the Ph needs to be increased use [Bonide Hydrated Lime](#).

Remember that Fall is the best time for planting. Visit your garden center. There is a good selection of plants and they are priced to move. When planting these new plants water them in with [Kick Start](#) to help establish a quick root system. Don't forget to feed you deciduous trees and shrubs with [Plant Trust](#) now.

Perennials:

If your perennials are over crowded now is the time to divide them after cutting them back for the season. Extra plants can be given away or planted in a new bed. After transplanting them be sure to use the [Green Light AMAZE](#) before you mulch the area with Sweet Peet to prevent weeds (Chickweed , Henbit, and Shepard Spurge) And always remember to feed your perennials now with [Plant Trust Flower and Bulb fertilizer](#). Delphinium and Foxglove seed stalks can be cut into smaller pieces and can be spread onto a new growing area (Cover them lightly with compost). Next spring this should produce many new Delphinium and Foxglove plants.

Flowers:

Make sure you have Tulips, Daffodils , and Crocus handy after the first frost, it will be time to replace the summer flowers with these bulbs. If you want instant color you can plant Violas / Pansies over top of the newly planted Dutch flower bulbs, but make sure the bulbs are planted deep enough (3-5 inches) After planting the Violas / Pansies apply [Plant Trust Flower and Bulb fertilizer](#), It will last long enough to feed the plants from fall and throughout Spring. Plant Fritillaria bulbs to repel moles and mice in your bulb beds. Be sure to use [Bonide Mouse magic](#) now to keep mice out of your garage , camper, boat, and sheds.

Lawns:

Lawns that have not been fed with [Turf Trust](#), feed as soon as possible. Grass that has not been fed will have a higher chance of being overtaken by weeds. Do not use any starter or winterizers with high Phosphate numbers (middle number) Young grass that was planted this fall and has been mowed at least twice can be sprayed with [Speedzone](#) to kill any broadleaf weeds that are growing in them (spray when day temps are 55 or above). To prevent there return you can apply [Green Light Portrait](#) at the same time. Leaves continue to drop onto the lawns, keep up with them and remove them as needed by blowing or raking them. Apply [Kick Start](#) now to newly seeded lawns.

House Plants:

House plants that are susceptible to mites (Ivy, Prayer Plant, Croton , and Schefflera) Treat them with [Clear Spray Green](#) now, before they show signs of an infestation.

Stone Patios , Decks, Roofs, and Siding not treated with [Wet & Forget](#), do it now to remove mold, mildew, Lichen , and moss. Winter weather will assist with the cleaning of those areas.

Remember to always follow the labeled instructions when using any pesticide. For more information visit [PestFacts.org](#)
