

8/01/2020

To kill weeds in the lawn (clover, creeping charlie, spurge, and other non grassy weeds), use [Speed zone](#) . Apply the *Speed zone* in the next two weeks. *Speed zone* should be applied in the evening. Reseeding with Water Saver RTF grass seed can be done three weeks after the [Speed zone](#) application. After killing the weeds if you are not seeding (must wait 60 days after gallery to seed) apply Gallery weed preventer to prevent new weeds. [Gallery](#) will only prevent new weeds that have not germinated yet so the existing weeds will still need to be treated.

If you had a problem last season with Annual bluegrass (poa annua) then apply [Dimension](#) now, to prevent an annual bluegrass infestation. (if Applying Dimension in August no seeding can be done this fall)

Nutsedge can be rampant in lawns. Nutsedge is a weed that looks like a grass plant. It grows three times as fast as your lawn grows. It is pale green and grows upright. In order to correct nutsedge, use [Sedgehammer plus](#). Hand weeding is not recommended because tubers that are left behind will grow into new nutsedge plants.

Southern Lawns:

Zoysia and Bermuda grass

Now is the last chance this season to establish a zoysia or Bermuda grass lawn from seed. First aerate the lawn 3 times with a hollow tine aerator, going north / south, then east / west, then diagonal. Sow the seed, and water everyday. At the first sign of germination (10 to 14 days) make an application of Nico's Best Kick Start. Make 2 more applications of Nico's Best Kick Start 1 week apart. Fertilize the new lawn next spring late May with Turf Trust.

1lb. of Zoysia seed will make 1,000 sq. ft. of Zoysia lawn.

1lb. of Hybrid Bermuda grass seed will make 500 sq. ft. Bermuda grass lawn.

Now is the last chance this season to fertilize Hybrid Bermuda lawns with Turf Trust.

On Southern St. Augustine or Centipede grass lawns do not use Monterey Spurge power or Speedzone for weed control on these lawns you should use Hi Yield Atrazine.

Shrubs:

To keep your roses blooming until November, feed them now with [Garden Trust](#).

Gallery can also be used to prevent broadleaf weeds in ornamental beds to prevent winter weeds. If you seed weeds come up after the [Gallery](#) application they are most likely perennial weeds. The Gallery will only prevent weeds that come from seed.

8/01/2020

You should continue to feed your indoor houseplants with [Seamate](#) every time you water these plants.

Do not trim azaleas any more. They have set next years buds. New growth will be subject to winter injury.

Feed amaryllis in the garden with *Cotton seed meal* , 3 tablespoons per large bulb. Feed potted amaryllis only 1/2 a tablespoon per pot. During the summer, amaryllis should be planted in the ground outside, if possible. When choosing a spot to plant the amaryllis, remember it should be in a partial shade area with a half a day of sun.

Now is the time to inspect alberta spruce trees for mites. You will see brown spots starting from the inside of the spruce when mites are present. To inspect for mites, take a 8x10 white piece of paper and shake 1/2 green and 1/2 brown foliage onto the paper. Mites will look very small like pinpricks. To treat this, use [Summit year-round spray oil](#) .

Mimosa trees (silk trees) with webworms can be treated with [Bonide eight](#). When using Bonide eight, you should apply this product in the evening.

If Lace-bugs are devastating your azaleas, and you did not protect them with a drench of *Bonide annual tree and shrub insect control*, then you should spray your azaleas now with [Bonide systemic insect control](#).

Flowers:

Do not buy fall mums in bloom now. They will be gone in two weeks. Mums bloom naturally in September, October, and November. It is okay to buy locally grown, budded, not in bloom, potted, fall mums.

Due to the extreme heat make sure that you water and feed your potted flowers and plants that are outside as needed. Ten inch size or smaller hanging baskets, may need to be watered two times a day. And the same goes for potted tomato plants.

Next season only purchase potted plants in pots/baskets 12 inches or larger. The 10 inch and smaller pots are almost impossible to keep wet.

You should continue to feed flowers, hanging and container plants with Monterey Fish and Poop Fertilizer weekly.

Remember to always follow the label instructions on the products.
